## Section I.

### INTRODUCTION

#### 1. Scope

This manual lists repair parts and special tools required for the performance of organizational maintenance of the M2 water heater.

#### 2. General

This repair parts and special tools list is divided into the following sections:

*a. Prescribed Load Allowance (PLA), Section II.* A composite listing of the repair parts, special tools, test and support equipment having quantitative allowances for initial stockage at the organizational level.

*b. Repair Parts, Section III.* A list of repair parts authorized for the performance of maintenance at the organizational level in figure and item number sequence.

*c. Special Tools, Test and Support Equipment, Section IV.* A list of special tools, test and support equipment authorized for the performance of maintenance at the organizational level.

*d. Federal Stock Number and Reference Number Index, Section V.* A list of Federal stock numbers in ascending numerical sequence followed by a list of reference numbers in ascending alpha-numeric sequence, cross-referenced to the illustration figure number and item number.

#### 3. Explanation of Columns

The following provides an explanation of columns in the tabular lists in sections II, III, and IV:

*a. Source, Maintenance and Recoverability Codes (SMR), Column 1:*

(1) Source code, indicates the selection status and source for the listed item. Source codes are:

Code	Explanation
P --	Repair parts which are stocked in or supplied from the GSA/DSA, or Army supply system, and authorized for use at indicated maintenance categories.
P2 --	Repair parts which are procured and stocked for insurance purposes because the combat or military essentiality of the end item dictates that a minimum quantity be available in the supply system.

Code	Explanation
P9 --	Assigned to items which are NSA design controlled: unique repair parts, special tools, test, measuring and diagnostic equipment, which are stocked and supplied by the Army COMSEC logistic system, and which are not subject to the provisions of AR 380-41.
P10 --	Assigned to items which are NSA design controlled: special tools, test, measuring and diagnostic equipment for COMSEC support, which are accountable under the provisions of AR 380-41, and which are stocked and supplied by the Army COMSEC logistic system.
M --	Repair parts which are not procured or stocked but are to be manufactured at indicated maintenance categories.
A --	Assemblies which are not procured or stocked as such but are made up of two or more units, each of which carry individual stock numbers and descriptions and are procured and stocked and can be assembled by units at indicated maintenance categories.
X --	Parts and assemblies which are not procured or stocked; the mortality of which normally is below that of the applicable end item; and the failure of which would result in retirement of the end item from the supply system.
X1 --	Repair parts which are not procured or stocked, the requirement for which will be supplied by use of next higher assembly or component.
X2 --	Repair parts which are not stocked. The indicated maintenance category requiring such repair parts will attempt to obtain through cannibalization; if not obtainable through cannibalization, such repair parts will be requisitioned through normal supply channels.
G --	Major assemblies that are procured with PEMA funds for initial issue only to be used as exchange assemblies at DSU and GSU level. These assemblies will not be stocked above DS and GS level or returned to depot supply level.

(2) Maintenance code, indicates the lowest category of maintenance authorized to install the listed item. The maintenance level codes are:

Code	Explanation
C --	Crew or operator maintenance
O --	Organizational maintenance

(3) Recoverability code, indicates whether unserviceable items should be returned for re-

covery or salvage. Items not coded are expendable. Recoverability codes are—

Code	Explanation
R --	Repair parts and assemblies which are economically repairable at DSU and GSU activities and normally are furnished by supply on an exchange basis.
S --	Repair parts and assemblies which are economically repairable at DSU and GSU activities and normally are furnished by supply on an exchange basis. However, when these items are determined to be uneconomically repairable by a GSU, they will be evacuated to a depot for evaluation and analysis before final disposition.
T --	High dollar value recoverable repair parts which are subject to special handling and are issued on an exchange basis. Such repair parts normally are repaired or overhauled at depot maintenance activities.
U --	Repair parts specifically selected for salvage by reclamation units because of precious metal content, critical materials, high dollar value reusable casings or castings.

b. *Federal Stock Number, Column 2.* This column indicates the Federal stock number assigned to the item and will be used for requisitioning purposes.

c. *Description, Column 3.* This column indicates the Federal item name and any additional description of the item required. The abbreviation "w/e", when used as a part of the nomenclature, indicates the Federal stock number includes all armament, equipment, accessories, and repair parts issued with the item. A part number or other reference number is followed by the applicable five-digit Federal supply code for manufacturers in parentheses. Repair parts quantities included in the kits, sets, and assemblies are shown in front of the repair part name. Material required for manufacture or fabrication is identified.

d. *Unit of Measure (U/M), Column 4.* A 2 character alphabetic abbreviation indicating the amount or quantity of the item upon which the allowances are based, e.g., ft, ea, pr, etc.

e. *Quantity Incorporated in Unit, Column 5.* This column indicates the quantity of the item used in the assembly group. A "V" appearing in this column in lieu of a quantity indicates that a definite quantity cannot be indicated (e.g., shims, spacers, etc.).

f. *15-Day Organizational Maintenance Allowance, Column 3 of Section II and Column 6 of Section III and IV.*

(1) The allowance columns are divided into four subcolumns. Indicated in each subcolumn opposite the first appearance of each item is the

total quantity of items authorized for the number of equipments supported. Subsequent appearances of the same item will have the letters "REF" in the allowance columns. Items authorized for use as required but not for initial stockage are identified with an asterisk in the allowance column.

(2) The quantitative allowances for organizational level of maintenance represents one initial prescribed load for a 15-day period for the number of equipment supported. Units and organizations authorized additional prescribed loads will multiply the number of prescribed loads authorized by the quantity of repair parts reflected in the density column applicable to the number of items supported to obtain the total quantity of repair parts authorized.

(3) Organizational units providing maintenance for more than 100 of these equipments shall determine the total quantity of parts required by converting the equipment quantity to a decimal factor by placing a decimal point before the next to last digit of the number to indicate hundredths, and multiplying the decimal factor by the parts quantity authorized in the 51-100 allowance column. Example, authorized allowance for 51-100 equipments is 40; for 150 equipments multiply 40 by 1.50 or 60 parts required.

(4) Subsequent changes to allowances will be limited as follows: No change in the range of items is authorized. If additional items are considered necessary, recommendation should be forwarded to: Commanding Officer, Edgewood Arsenal, ATTN: SMUEA-TSE-TPL, Edgewood Arsenal, Maryland 21010 for exception or revision to the allowance list. Revisions to the range of items authorized will be made by Edgewood Arsenal based upon engineering experience, demand data, or TAERS information.

g. *Illustration, Column 7.* This column is divided as follows:

(1) *Figure number, column 7a.* Indicates the figure number of the illustration in which the item is shown.

(2) *Item number, column 7b.* Indicates the callout number used to reference the item in the illustration.

#### 4. Special Information

a. Parts which require manufacture or assembly at a category higher than that authorized for installation will indicate in the source column the higher category.

b. Action change codes indicated in the left hand margin of the listing page denote the following:

N—Indicates an added item not included in previous publications

C—Indicates a change in data

F—Indicates a change in FSN only.

c. The following publications pertain to the M2 water heater:

TM 3-4230- 209-12	Operator and Organiza- tional Maintenance Manual
TM 3-4230- 209-12	Lubrication Order
TM 3-4410- 201-12	Operator and Organiza- tional Maintenance Manual

## 5. How to Locate Repair Parts

a. When Federal stock number or reference number is unknown:

(1) *First*. Using the table of contents, determine the assembly group i.e., cabinet, control box, skid assembly, etc., within which the repair part belongs. This is necessary since illustrations are prepared for assembly groups and listings are divided into the same groups.

(2) *Second*. Find the illustration covering the assembly group or assembly sub group to which the repair part belongs.

(3) *Third*. Identify the repair part on the illustration and note the illustration figure and item number of the repair part.

(4) *Fourth*. Using the Repair Parts Listing, find the assembly group or assembly sub-group to which the repair part belongs and locate the illustration figure and item number noted on the illustration.

b. When Federal stock number or reference number is known:

(1) *First*. Using the index of Federal stock numbers and reference numbers find the perti-

nent Federal stock number or reference number. This index is in ascending FSN sequence followed by a list of reference numbers in ascending alpha-numeric sequence, cross-referenced to the illustration figure number and item number.

(2) *Second*. Using the Repair Part Listing, find the assembly group or assembly sub group of the repair part and the illustration figure number and item number referenced in the Index of Federal Stock Numbers and Reference Numbers.

## 6. Abbreviation

Abbreviation	Explanation
cad	cadmium
CRES	Corrosion Resistant Steel
DPDT	Double-pole, Double-throw
GPH	gallon per hour
o/a	overall
pltd	plated
SPST	Single-pole, Single-throw
UNC	Unified Coarse Thread
UNF	Unified Fine Thread
w	with
w/o	without

## 7. Federal Supply Codes for Manufacturers

Code	Manufacturer
11583	Champion Spark Plug Co. Toledo, Ohio
13800	Commercial Filters Corp. Lebanon, Indiana
80691	Ever Tite Coupling Co., Inc. New York, N. Y.
81348	Federal Specification
81349	Military Specification
81361	U.S. Army, Edgewood Arsenal Edgewood Arsenal, Md. 21010
96906	Military Standards

## 8. Reporting of Equipment Publication Improvements

The reporting of errors, omissions, and recommendations for improving this publication by the individual user is encouraged. Reports should be submitted on DA Form 2028 (Recommended Changes to DA Publications) and forwarded direct to: Commanding Officer, Edgewood Arsenal, ATTN: SMUEA-TSE-TP, Edgewood Arsenal, Md. 21010.
